

WHITEMOSS ECO SUPPLIES - BunkerMat

Europe's leading golf bunker liner

BunkerMat™

Having supplied Celtic Manor Resort for in excess of 20 years, Whitemoss have seen the issues caused by heavy rain that not only runs off the hillside on the 2010 course but that also runs through the soil structure.

Working with Jim McKenzie and his project team headed by Chris and Alan, Andy Law and Mike Crabtree devised a solution that would intercept the water coming through the soil on the bank adjacent to the 2010 clubhouse. They then installed a full herringbone drainage system in the bunker base to take the run off and any water falling directly into the bunker away quickly. The MegaFlo flat panel drainage supplied exclusively by Whitemoss was installed in less than 3 hours! Typical round pipe drains requiring excavation of trenches and stone backfill would have taken in excess of a full day to install requiring an excavator, tractor and trailer etc. MegaFlo is 2 ½ more efficient at moving water too so it's a win win.

BunkerMat liner was then installed to prevent subsoil contamination, to retain sand on the bunker faces and to offer a consistent, stable bunker base.

The bunker was completed with the installation of 56 tonnes of WhitemossEco Bunker 4 sand.

This was the biggest bunker WhitemossEco have installed to date at 354m²! They used 140 linear metres of MegaFlo including the perimeter drain and the full herringbone system.
